## DreamerGear Evaluation

Intergraph Security Framework 8.0.2

Exact Name and Version of Product	Intergraph Security Framework 8.0.2
Manufacturer and Website	Intergraph <a href="http://www.intergraph.com/">http://www.intergraph.com/</a>
Type of Product	PSIM* – Situation Management
Uses	Command and control center
What We Loved	Maturity and incredible diversity of systems supported
What We Didn't	Costly and complex installation and integration
Price	Estimated, Very Expensive
Overall Rating	3 out of possible 5

### Overview

Intergraph is designed for the most demanding deployments. The product has the broadest sensor and device support and the company has the richest experience in security command and control systems. The software is very reliable benefiting from dozens of years and deployments to work out the bugs. It is heavy, requiring plenty of warm bodies to install and configure, but once deployed it is a reliable workhorse.

Customers get a complete operational picture from the product, pulling together real time information from multiple sources such as 911 calls, physical security and environmental sensors, video, access control, and so forth all in one visual display designed to make faster operational decisions. For example, automated video screens may be triggered by combinations of alerts. An invalid badge read will pop up relevant cameras, the locations of which instantly appear on a map display. Reports can show a record of what video was actually viewed by the operator, who was dispatched to investigate, and all related actions of the operator.

The Intergraph Security Framework is actually a number of different software products deployed as needed. But also professional services to install and set up. Due to the complexity of set up and customization, third-party integrators are usually necessary. We feel that most prospective customers of situation management software will not feel that the additional device support is worth the cost.
