DreamerGear Evaluation

Proximex Surveillint 1.5

Exact Name and Version of Product	Surveillint 1.5
Manufacturer and Website	Proximex http://www.proximex.com/
Type of Product	PSIM* - Situation Management
Uses	Command and control center
What We Loved	Beautiful user interface; single click view of events; instant reports
What We Didn't	Short-staffed company with limited implementation support
Price	Starts at \$20,000
Overall Rating	4 out of possible 5 - RECOMMENDED

Overview

Proximex stands out as easy to deploy and easy to use and earns our **Recommended** rating. The product has an excellent pedigree, with several members of the executive and development teams coming from NetIQ, a company with a successful product in a related category of information technology. The product integrates with many common security systems and permits limited video management (with expanded capabilities expected in version 2.0).

While it has less flexibility in out of the box features than other products, Surveillint produces instant user appeal. The graphical user interface (GUI) and the simulation tools dramatically shorten the learning curve for this software. The product is designed with the reliability and scalability of the best IT systems, and ensures that every deployment will enjoy excellent performance.

One of the highlights of the product is the integrated incident management system. It is easy to use and intuitive, tracking all activities related to opening tickets and producing reports. Proximex is a company that knows how to produce excellent software. Unfortunately for prospective customers, it just doesn't have enough sales people on the street to ensure that it will be around long enough to grow its market share.
